

**Clinical and Technical Skills-** Upon completion of the program, PA students will be able to perform the appropriate physical exams and procedures necessary for clinical practice to evaluate acute and chronic conditions and form an accurate differential diagnosis. They will be able to recognize abnormal signs, symptoms, and exam findings and choose diagnostic studies based on those findings.

**Clinical Reasoning and Problem-Solving-** Upon completion of the program, PA students will be able to use analytical skills to evaluate a patient's condition based on the information they have collected. Using this information, they will be able to formulate an assessment and plan while also recognizing their scope of practice limitations.

**Interpersonal and Communication Skills-** Upon completion of the program, PA students will be able to communicate in a professional and culturally responsive manner to collect the medical information needed for quality patient care. They will be able to effectively educate and counsel patients consistent with the patient's needs and ability.

**Medical knowledge-** Upon completion of the program, PA students will be able to integrate their knowledge of the human body and its health needs, using clinical resources and appraising the medical literature.

**Professional Behavior and Practice-** Upon completion of the program, PA students will be able to act in a manner consistent with the values of, and within the regulations of the PA profession.
